Introduction & Background

1.1 Expanded Program on Immunization, Pakistan

The Expanded Program on Immunization (EPI) is a public health program, launched in Pakistan in the year 1978. The aim and aspiration behind the launch is to protect children through immunization against Childhood Tuberculosis, Poliomyelitis, Diphtheria, Pertussis, Tetanus and Measles. Moreover, the EPI program also vaccinates pregnant women with Tetanus Toxoid vaccine to protect newborns from neonatal tetanus. Over these years, with support from the Government of Pakistan and development partners, EPI has included two more important vaccines, Hepatitis B and Hib (Haemophilus influenza type B) in its childhood immunization paraphernalia. In 2012, the Government also announced to introduce and add pneumococcal vaccines along with the other immunization vaccines.

The main objective of the EPI program is to reduce mortality rate, disease and disability that occur due to vaccine preventable diseases (VPDs). The approach to achieve this objective is through providing maximum contribution to strengthen the National health systems and attainment of the Millennium Development Goal 4 (MDG-4)¹. EPI services are provided almost exclusively through the public health delivery network by means of fixed centers and outreach services. The centers are managed by the vaccinators with support from the lady health workers (LHWs), basic health units (BHU) staff and hospital staff.

1.2 Introduction to vLMIS

In recognition of numerous challenges with the vaccine management system, the Federal and Provincial Governments in Pakistan are keen to improve data visibility and address the supply chain challenges. Amongst other possible solutions, stakeholders have identified the need of an integrated web-based LMIS on priority basis to address these data visibility issues. In April 2013, the Government of Pakistan through the National Vaccine Management Committee (NVMC), requested USAID to provide support in enhancement of the existing web-LMIS. The enhancement request is to include a module for managing vaccine and cold chain data, referred as the vaccine logistics management information system (vLMIS).

The request was proposed after reviewing Pakistan specific web-based LMIS for contraceptives and tuberculosis medicines developed by the USAID | DELIVER PROJECT and John Snow, Inc. (JSI).

¹Ministry of Health 2001 *National Health Policy*, Islamabad : Government of Pakistan

The project started to work on the vLMIS enhancement, improvement and development from May 2013. To ensure the capability of vLMIS, in serving the needs of the EPI program and the Polio eradication effort, all public and private sector stakeholders agreed on a common Roadmap. This roadmap ensures the operation of vLMIS effectively functioning from January 2014, initially in 54 priority and Polio high risk districts of the country.

1.3 vLMIS Objectives

In collaboration with the USAID and other development partners; including UNICEF and WHO, the Federal, Provincial and Regional Governments/ DOH will oversee the implementation of vaccine logistics management information system. The objectives of the vLMIS will be as follows:

- Provide an integrated data repository system that will centralize vaccine and cold chain logistics data, for each level of healthcare system. The repository will be able to standardize quality-check, store, manage and protect logistics data;
- Collect data at all level and to ensure data integrity at the point of data entry. The vLMIS will also allow data capturing via web applications, mobile devices, remote desktop and other cooperating organizations' systems;
- Provide timely and accurate key performance indicator (KPI) reports at all the program levels, stakeholders, funding and implementing partners. This will enable the users to make informed and timely decisions;
- Provide an easy-to-use system supporting the routine EPI and SIA supply chain business processes of all program levels and stakeholders;
- Serve as an analytical toolkit to be used by the supply chain decision makers and other involved in processing raw logistics data. This will be accomplished in accordance with the standard operating procedures thresholds, business rules, and management report input requirements.
- Enable Public Health Managers at all the levels to access real time data. The purpose is to ensure the vaccines & cold chain equipment is always available, in sufficient quantities at the service delivery points to meet the user's needs.
- Bring down the wastage of vaccines and cold chain equipment.
- Enable policy/decision makers to take evidence based decisions in reference to forecasting, quantification, financing and procurement planning.

1.4 Vaccine Logistics Data Entry

Along with EPI implementation in general, Provincial EPI Cells working under the Provincial Health Departments will be responsible for ensuring vaccine logistics data is properly entered into the vLMIS and is up-to-date. The data entered in the vLMIS will be uploaded as national repository on main server, installed at the “EPI Coordination and Planning Resource Centre”, established with USAID’s support within the Ministry of National Health Services, Regulation & Coordination (MoNHSRC), Islamabad. The data will be accessible by all the stakeholders / users for analysis, monitoring and decision making. All stakeholders have agreed on zero tolerance for non-reporting at all levels, and have signed statements of commitment.

In August 2013, All the district/agencies have come up with a cluster approach during the consultative meetings with the EPI staff of Polio high risk districts / FATA agencies. To maximize the benefit of the cluster based approach, individual list of the total union councils was prepared with clear identification of lead Union Council (UC) / Tehsil/Taluka. Within the Lead UCs, the districts further identified the EPI Centre vLMIS Data Entry Point. Keeping in view, the current human resource’s capacity of computer knowledge and electricity/internet availability, the lead UC will collect monthly vaccine consumption data from all the associated UCs/EPI centers manually. This data will be collated on the prescribed format with the following essential data items:

- Beginning stock balance
- Quantity received during the month
- Quantity issued to vaccinators during the month; any losses (and reason, such as expiry, damage, theft) or adjustments (transfer to/from another SDP or returned by a vaccinator),
- Closing balance based on physical inventory

Once acquired, the data will be uploaded into vLMIS on monthly basis. Two staff members from each lead UC will be trained by the Project and will also be provided with IT hardware support for regular reporting.

1.5 EPI Directory

This EPI Directory is developed in consultation with the Federal, Provincial/Regional and District Governments. The directory contains contact details of the EPI focal points working at various government levels. As the vLMIS will be introduced and deployed initially in 54 priority and polio high risk districts of Pakistan (45 Districts/Agencies), 3 Towns and 6 Frontier Regions), therefore, the Directory contains contact information of only these districts, besides the contact details of Federal and Provincial EPI Cells. The scope of Directory will be expanded to all the 143 districts of the country once the Government of Pakistan decides for vLMIS expansion in the remaining 98 districts.

Purpose of this EPI Directory is to create friendly atmosphere and increase communication links among all the stakeholders. This is aspired to be achieved by using various means of strengthening the vaccine and cold chain logistics management system of the country. To ensure vLMIS implementation up to the UC level and close interaction with the field staff, the EPI Directory will largely contribute in bridging the communication gaps.

GLOSSARY

DISTRICT

District is an important and powerful mid-level administrative unit in settled areas of Pakistan. In tribal areas, district's counterpart is an Agency. Districts are grouped into administrative divisions, which in turn constitute provinces. Agencies are grouped into Federally Administered Tribal Area (FATA). Districts and Agencies comprise tehsils, talukas, cities, towns and villages.

Tehsil/Taluka:

A tehsil, which is called taluka in Sindh, is a sub-division of a district. Two or more tehsils constitute a district. A tehsil consists of one or more towns. Usually, the largest town in a tehsil serves as its headquarters. Tehsil also comprises a number of villages. As an entity of local government, tehsil office exercises certain fiscal and administrative powers over villages and municipalities within its jurisdiction.

Union Council:

Union council is the lowest tier of government in Pakistan and are often known as **village council** in rural areas. The territory represented by a village council usually comprises a large village and surrounding areas often including nearby small villages.

Cluster:

For Vaccine LMIS, Cluster is a group of contiguous EPI Centres. For ease of reporting, these Clusters were formed in consultation with District EPI Officers.

Lead UC (Union Council):

Each cluster has a Lead UC responsible for collecting paper based vaccine logistics data from its subordinate UCs and their EPI Centres and entering it into web-based vLMIS.

Cold Room:

In Vaccines Logistics Management, cold rooms are walk-through rooms designed to store vaccines under temperatures recommended by the World Health Organization. In Pakistan, there are a number of Cold Rooms at the federal and provincial headquarters. Divisions and some Districts, with some exceptions, have also Cold Rooms available to store vaccines prior to their transportation to Service Delivery Points.

EPI Sub-Stores:

A sub-store receives vaccine from district store and distributes it among the EPI centres in its geographic proximity. Sub-stores are often tehsil/taluka offices, RHCs or THQ hospitals.

ANNEXURE

List of 54 Priority vLMIS Districts and EPI Centres
